Current State Assessment

Pin-point vulnerabilities within your digital security environment and receive actionable feedback on how to reduce risk.

What is a Current State Assessment?

We all know the risks associated with cyber-attacks. To protect your organisation and its assets, first you need to be aware of all possible vulnerabilities.

Our Current State Assessment is designed to help you identify these vulnerabilities and determine the difference between your 'current' and 'ideal' state of digital security.

Working with Xentra, we'll help you discover these differences—and in turn—provide actionable feedback and remediation steps to improve your overall digital security setup, both on premise and in the cloud.

Outcomes

Gain full visibility into any existing vulnerabilities in your infrastructure

Create a robust plan to prioritise digital security policies and procedures

Develop effective risk management against malicious third parties

Take the first step towards achieving industry-leading digital security standards

How does it work?

We'll connect you with one of our technical experts who will gain an in-depth understanding of your organisation by carrying out a comprehensive audit of your infrastructure. Our audit follows the NIST Cyber Security Framework and assesses risk across four core areas; Identify, Protect, Detect and Respond. We'll then analyse the results, assign risk scores and provide detailed, impartial recommendations on how you can improve.

Respond

How do you isolate and respond to security incidents?

4

Detect

How do you monitor, pin-point and handle unusual activity?

3

Identify

List all equipment, data and software that you use.

1

Protect

What processes do you have in place to protect your network?

2

NIST

What's included?

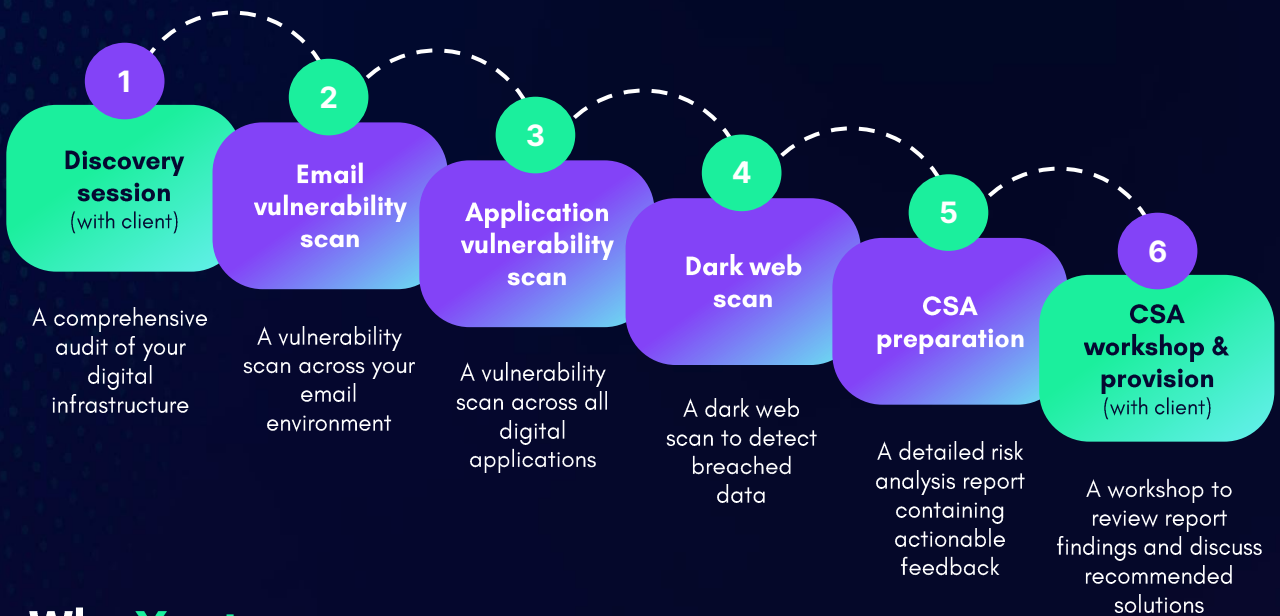

- ✓ A comprehensive assessment of your existing infrastructure and digital security processes led by one of our inhouse technical experts.
- ✓ A detailed risk analysis report with actionable feedback that highlights quick wins and remediation steps.
- ✓ A strategic 'current state' solutions workshop to review report findings and discuss the recommended solutions.

The process

Why Xentra

As a digital security partner that works with several vetted technology providers, our advice is impartial. We'll work with you to understand your exact requirements and recommend the best solutions.

Utilising the NIST framework and our own bespoke toolset, we ensure both on premise and cloud environments follow cyber security best practice and security policies; helping organisations develop and implement robust digital security solutions.

"Xentra assessed our current cyber security systems and compiled a detailed report analysing our cyber security posture. From there, they identified the gaps in our cyber security. Xentra worked with us to find, demo and install the right solutions following in-depth proof of concepts. The support and engagement from Xentra throughout this process was critical to us."

Michael Swart, Director of IT | Thomas's London Day Schools
